

TOPIC: DREAM HOME

MINI PROJECT-INTRODUCTION

The application “Dream Home” is a platform for common people and builders. It brings the builders with a reputation to the application for one sole purpose i.e. construct a building for a genuine user. The user and the builders are verified by the admin. The user can view the registered builders in the application along with their works, feedbacks and ratings.

The builder provides the plumbing, electrical, interior designing and engineering services. The plan consists of the estimate for plumbing, electrical, interior design etc. Once that plan approved by the user, according to the payment the builder assigns the workload to his service contractors and pays them for raw materials. Builders are add the contractors. Then contractor add the workers then, the work assigned to workers are done, they produce the work updates to the contractor, then contractor that monitor the works .If it's ok to him, He notifies the builder so that to complete their Payments. Here we can calculate the estimate cost of the house price

➤ **Admin**

Approve the users and builders that registered in the website

➤ **Users**

The user can view the registered builders in the application along with their works, Feedback and ratings. Request for the builder construct a building for him with his building specification

➤ **Builders**

Builders can add the contractors. Viewing and managing the request from the where builder, He can accept or reject the project .View user Floor plan details and download

➤ **Contractors**

View and manage builder request

Assign work to the Workers

➤ **Worker**

View and manage contractor request

Apply leave to the contractor

MAIN PROJECT-INTRODUCTION

The application “Dream Home” is a platform for common people and builders. It brings the builders with a reputation to the application for one sole purpose i.e. construct a building for a genuine user. The user and the builders are verified by the admin. The user can view the registered builders in the application along with their works, feedbacks and ratings.

The user will be very flexible in updating his profile and can post complaints and reviews on this application and the user can directly connect the workers for there any repair .We can request all the builders with our requirements and then they will replay the estimate cost and the days that to complete work so we can choose the best builder with less cost.We can include the other workers. We can set the worker can easily view there works and apply leave through it. We can making home plan graphic design

1. User

- Payment to Builder
- View review , Rating of the builder
- Add Review, Rating to the builder
- Estimate Rate is Calculated

2. Workers

- Add progress of work
- User can directly access the workers

3. Contractor

- View the progress of work
